Demonstration Phase

Demonstration

Date	**29/9/2026**
Team ID	**SWTID-2026-5649**
Project Name	**Implement client script and ui policy(incident)**

Demonstration Phase

1. Demonstrate UI Policy – High Impact Control

- Open Incident → Create New.
- Set Impact = 1 – High.
- The Assignment Group becomes mandatory.
- The Urgency field becomes read-only.
- Change Impact from High to another value.
- The mandatory/read-only behavior should be reversed because Reverse if false is enabled.

2. Demonstrate on Change Client Script

When **Impact = High**, the Client Script automatically sets:

Urgency = High

It also displays the message:

"Urgency set to High for High impact incident."

This demonstrates automatic field updating when the Impact value changes.

3. Demonstrate onSubmit Client Script

- Keep Impact = High.
- Leave Assigned to empty.
- Click Submit.
- The record should not be saved.
- An error message appears saying that Assigned To is mandatory for high-impact incidents.
- Then select a user in Assigned To and submit again. The Incident should save successfully.

4. Demonstrate on CellEdit Client Script

- Go to **Incident → All**.
- Try to directly edit the **State** field from the list.
- An alert appears:

"State cannot be updated using list editing. Please open the Incident."

- The State value remains unchanged.

5. Demonstrate Form-Based State Update

- Open the Incident record.
- Change the **State** from the Incident form.
- Click **Update**.
- The State change should be saved successfully.

This proves that State changes are blocked **only through list editing**, while normal form-based updates are allowed.
