Project Development Phase

Performance testing

Date	**29/9/2026**
Team ID	**SWTID-2026-5649**
Project Title	**Implement client script and UI policy(Incident)**

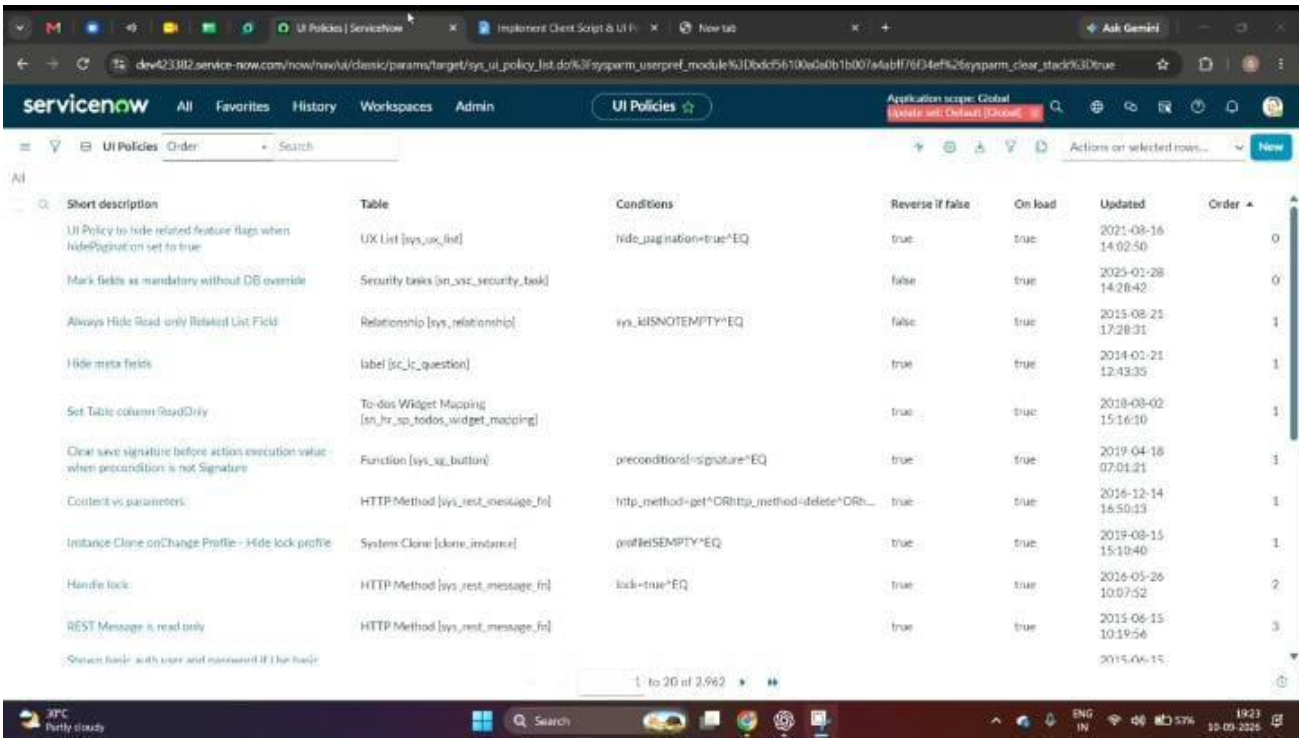

1. Create UI Policy on Incident

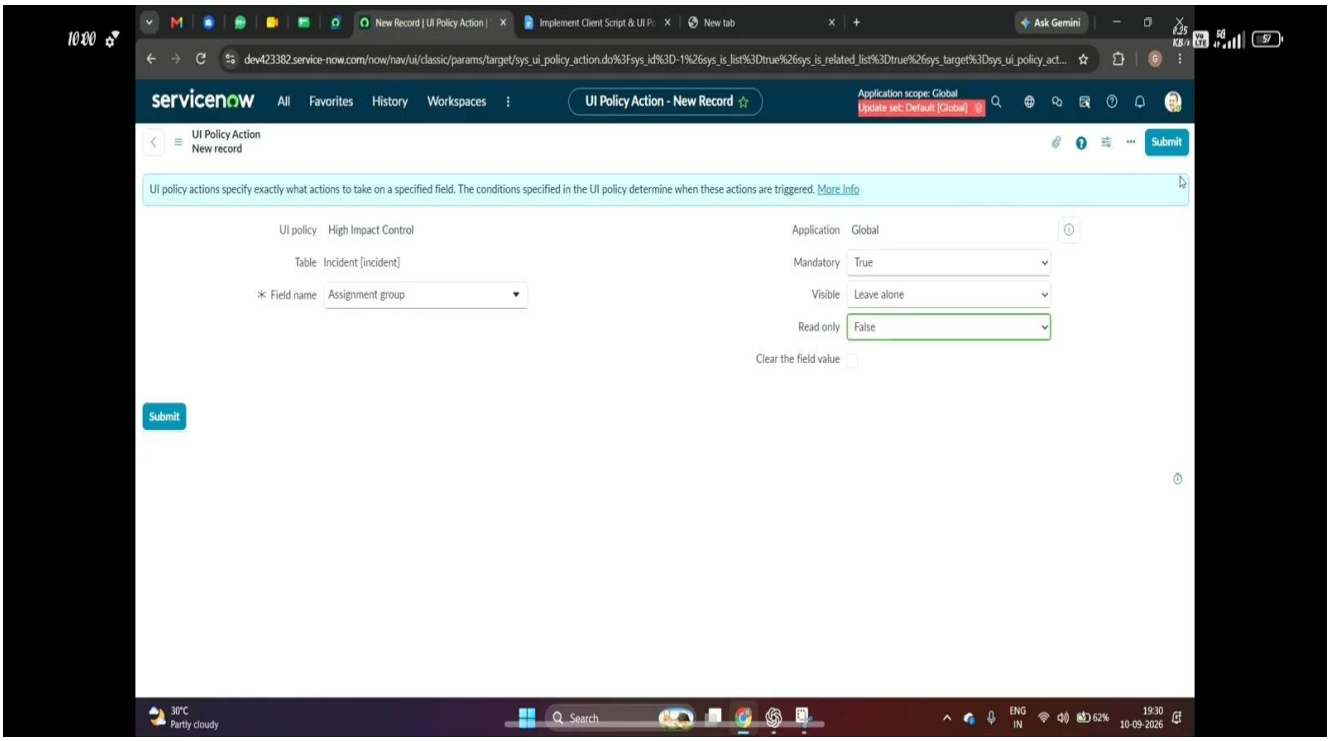

Log in to the ServiceNow instance with administrative or configuration access.

UI Policy – High Impact Control

1. Go to **System UI → UI Policies**.
2. Click **New**.
3. Enter:
   - **Name:** High Impact Control
   - **Table:** Incident
   - **Active:** Yes
4. Set condition:
   - **Impact = High**
5. Make **Assignment Group** mandatory.
6. Set **Reverse if false = Yes**.
7. Check the settings.
8. Click **Submit**

Result: When Impact is **High**, Assignment Group becomes mandatory. When Impact changes, the rule is reversed.

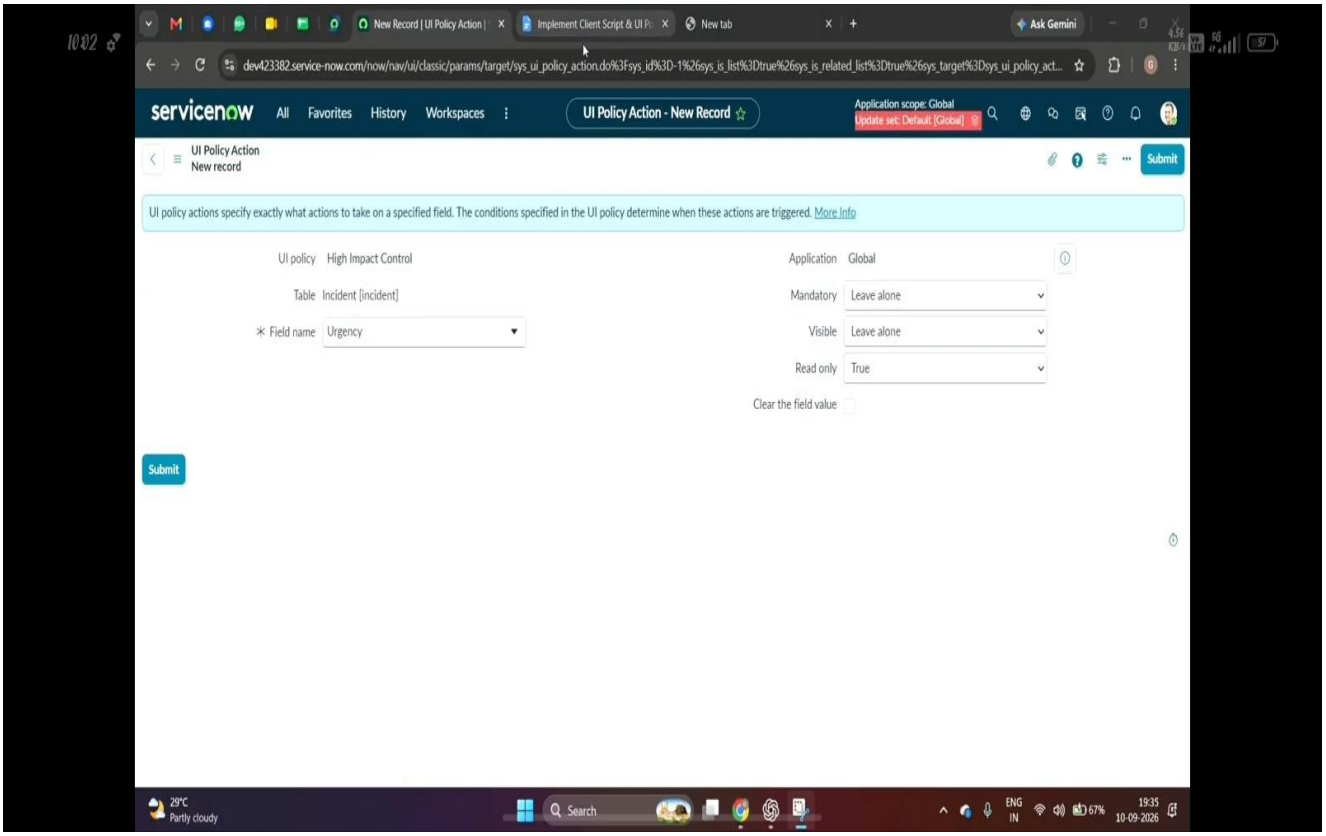

2. Create UI Policy Action – Urgency

UI Policy Action – Urgency

- Open the **High Impact Control** UI Policy.
- Select the **Urgency** field.
- Set **Read-only = Yes**.
- Keep **Visible** unchanged.
- When **Impact = High**, Urgency becomes read-only.
- When Impact changes, Urgency becomes editable again.
- Click **Submit** to save.

- 

3. Create onChange Client Script – Auto Set Urgency

- Go to **System UI → Client Scripts**.
- Click **New**.
- Set **Name:** Auto set urgency for high impact.
- Set **Table:** Incident.
- Set **Type:** onChange.
- Set **Field:** Impact.
- Set **Active:** Yes.
- Add the given script.

```
function onChange(control, oldValue, newValue, isLoading) {
```

```
if (isLoading || newValue == '') {

return;

}

if (newValue == '1') {

g_form.setValue('urgency', '1');

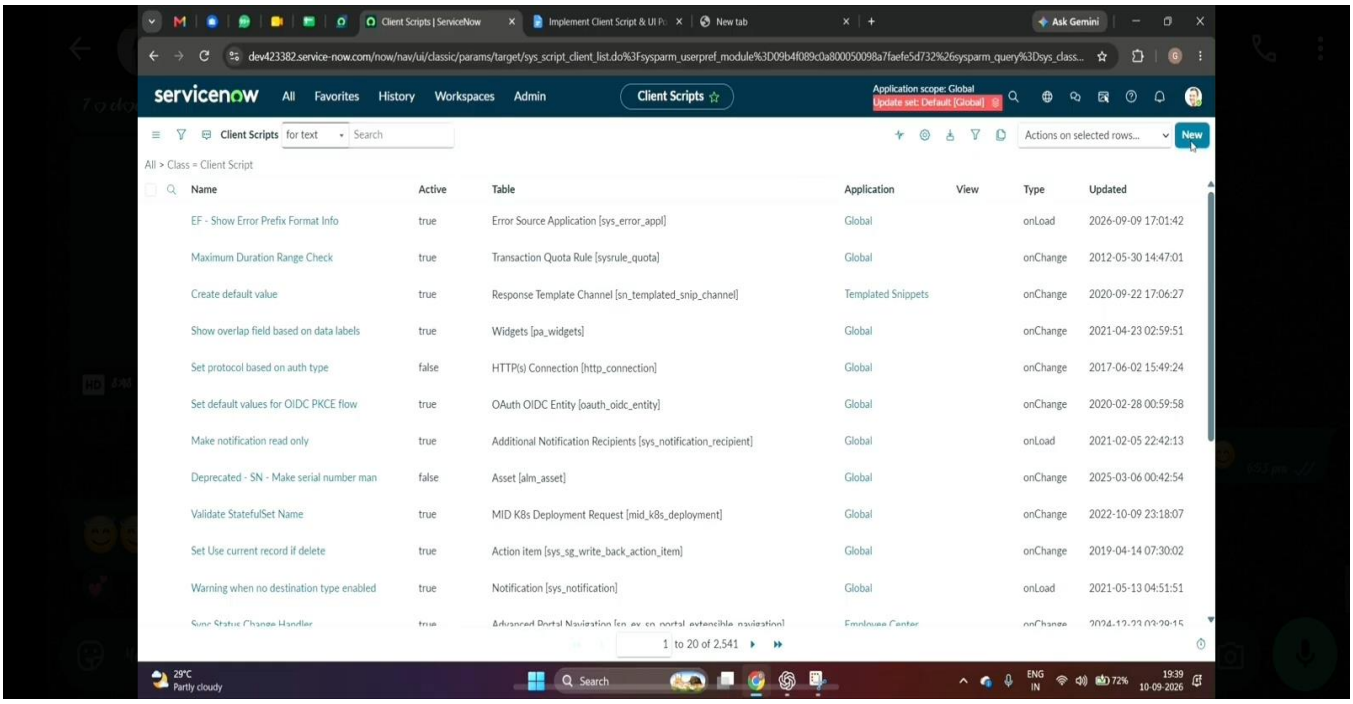

g_form.addInfoMessage('Urgency set to High for High impact incident.');

 }

}
```

- Click **Submit**.
- **Test:** Change Impact to **High** and check that **Urgency automatically changes to High**.

4. CreateonSubmit Client Script – Save Validation

- Checks the **Assigned To** field before saving.
- Applies when **Impact = High**.
- Blocks saving if **Assigned To** is empty.
- Displays an **error message** to the user.
- Allows saving when **Assigned To** is filled.
- Ensures High-impact Incidents have the required information.

Paste the script:

```
 function onSubmit() {

 if (g_form.getValue('impact') == '1' && g_form.getValue('assigned_to')
== '')

{

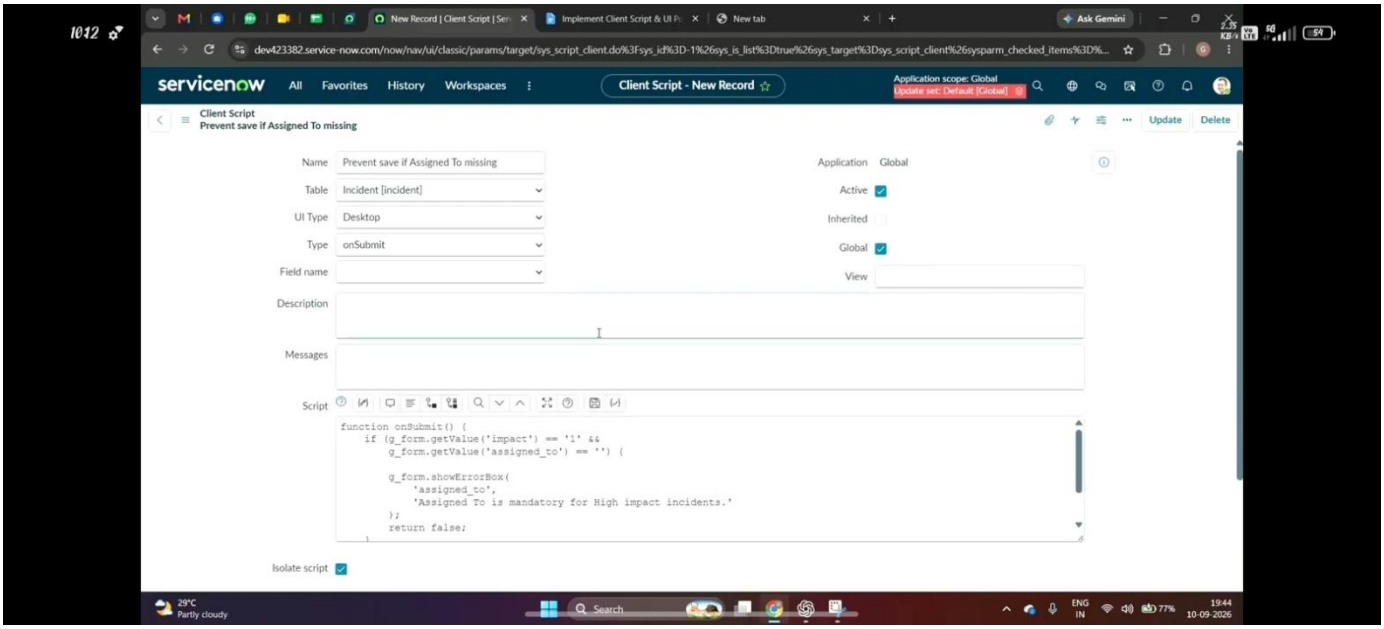

g_form.showErrorBox( 'assigned_to', 'Assigned To is mandatory for
High impact incidents.' );

return false;

} return true;

 }
```

- Click Submit.

5. Create onCellEdit Client Script Activity

Create Client Script

1. Navigate to Client Scripts:
2. Go to System UI → Client Scripts in your ServiceNow instance.
3. Click New to create a new Client Script.
4. Fill in the details:

○ Name:

Prevent state change via list edit – clearly indicates that the script prevents users from changing the State field directly in a list.

○ Table: Incident – applies the script only to Incident records.

○ Type: onCellEdit – runs whenever a field is edited directly in a list view.

○ Field name: State – the script will monitor changes to the State field.

○ Active: true – ensures the script is enforced immediately

5. Paste the script into the script editor section.

6. Click Submit to save the Client Script.

7. In the Script field, paste the following code:

```
function onCellEdit(sysIDs, table, oldValues, newValue,
callback)

{

alert('State cannot be updated using list editing. Please open
the Incident.');

callback(false); }
```

8. Click Submit.

6.Testing the Configuration

Testing – Mandatory Enforcement

- Open **Incident → Create New**.
- Set **Impact = High**.
- Leave **Assigned To** empty.

- Click **Submit**.
- The Incident should **not be saved**.
- An **error message** should appear for the Assigned To field.
- Check that **Urgency is automatically set to High** and the configured fields behave correctly.
- This confirms that the **UI Policy and onSubmit Client Script** are working as expected.
